

NATURAL GAS FIRED EM50 HNG

SPECIFICATION DATASHEET

Energy Efficiency: A++

Operational mode: Mains parallel operation

Fuel: Natural gas & H2* ready

Electrical output (P_{el}): 50kW(e) $^{2)}$ min 25 kW Thermal output (P_{th}): 90.1 kW $^{2)}$ min 57 kW

Fuel consumption: 139.2 kW¹⁾ (nett) 154.5 kW

Standard reference conditions according to DIN ISO 3046-1: The technical data are based on natural gas H with a heating value of 10.0 kWh/Nm³ (total air pressure 100 kPa, air temperature $25^{\rm o}$ C, relative humidity 30%, 100m above sea level). Power adjustment at ambient conditions according to DIN ISO 3046-1 respectively DIN 6271-3. The tolerance of the specific fuel consumption is +5% at nominal power and the tolerance of the usable thermal output is 7% at nominal power. We reserve the right to change data and characteristics without prior notice in accordance with our business policy and the ongoing development process.

ENERGIMIZER 50H CONTROL BR18

Programmable BR18 SPS control system to control , adjust , calculate , measure and display result . The control system is equipped with a full graphics display and all function buttons , required to operate the combined heat and power plant . The 5.7" LCD display shows information about the system and its current status

The BR18 can optionally be expanded by a heating control system, requirement peak load boiler (up to 2 boilers), data transfer via LAN and Internet with an error notification via email (only with DSL) and an interface connection to external systems (Ethernet UDP, Mod-Bus RTU, RK 512, 3964R).

Notes on installation

At the place of installation, a distance of **800mm** must be freely accessible all around the CHP. In addition a minimum clearance height of 2500mm above the installation site be made available and a level surface with sufficient load bearing capacity is required (Floating screed is not suitable)

If the minimum clearances are not observed, service and repair work can lead to increased costs due to difficult working conditions
